

Case Study: Fleet Control

Problem

Each fleet is different. At the same time, each fleet is the same. No matter what kind of cargo you are transporting or what kind of services you offer, when your drivers are on the road, it can be difficult to keep track of them. You need to communicate with your drivers, without the distraction of requiring them to talk on cell phones while on the road. You would like an efficient way to track the location of your vehicles and the amount of time spent at each property, in order to comply to contractual obligations. In addition, you would like to enforce a speeding policy to realize a better fuel economy from your vehicles, know the status of your vehicles and eliminate any unauthorized driving and/or unnecessary stops.

Solution

Evaluate your fleet and personnel and improve the delivery process, uncover unknown issues, and monitor your costs. Use the TraceME Module to know what your fleet is doing at any given time and assure yourself that the fleet is being fully utilized and efficient. With the TraceME Module less time will be spent driving around wasting time, doing personal errands, and more time working since management can now monitor the location of their drivers throughout the day.

Additional Benefits

Comply to Government Regulations

Make sure that drivers are meeting the working hours regulations, and prevent driver fatigue. The TraceME Module can provide data (driving speed, off route driving, working hours and rest periods, etc.) and provide prove - using logs - that regulations are met. Error-prone manual reporting will be something of the past.

Quick Retrieval of Stolen Vehicles

With the TraceME Module you can get your vehicle back sooner than had you relied solely on the police, and with less damage. Because of this, insurance companies offer owners a discount on the comprehensive portion of their policies — often 10 percent or more.

Improved Time Management

Eliminate all billed minutes and discussions about hours that were not actually worked by your employees and eliminate time spent by employees and the accounting department having to record all times.
